

Empowering the Enterprise: Building Agentic AI Business Applications with Mendix

This Challenge focuses on harnessing the power of agentic AI to build intelligent, business-ready applications using the Mendix low-code platform. Participants will explore how AI agents can enhance enterprise workflows by making decisions, automating tasks, and interacting with systems independently. The goal is to rapidly prototype innovative AI-driven solutions that demonstrate how next-generation software development can be accelerated and transformed through Mendix and AI integration.
